

## **Corning Energy Corporation Environmental Policy**

### **Environmental Stewardship**

We conduct our businesses and facility operations in a manner that minimize adverse environmental impacts. One of our goals is to reduce the amount of pollution that company operations produce.

### **Environmental Projects**

Our core principles include a commitment to the well-being of our communities; Involvement in environmental remediation initiatives; and a continuing effort to safeguard the environment and reduce our greenhouse gas footprint.

### **Ongoing Projects Include:**

- Corning Natural Gas Corporation
  - Systematic pipe replacement and leak elimination programs.
  - Recycling program.
  - Renewable natural gas projects.
  - Certified natural gas program.
  - High efficiency appliance subsidies.
- Pike County Light & Power
  - Gas main replacement program.
  - Recycling program.
- Leatherstocking Gas Company
  - Certified natural gas program.
  - High efficiency appliance subsidies.

### **Environmental Disclosure**

We provide greenhouse gas emissions reports to the U.S. Environmental Protection Agency and other regulatory agencies.

## Environmental Policy

The following principles and actions provide a framework for our environmental stewardship and sustainable business practices:

- Comply with all applicable requirements of environmental laws, regulations, permit requirements, and company policies applicable to our operations.
- Incorporate environmental impact considerations into decision-making processes concerning existing and future operations.
- Support the conservation of energy and natural resources through strategic planning, efficient operating practices, technology, and consumer education.
- Minimize waste through recycling and other means, and properly manage any waste that is created.
- Foster a culture where employees have the encouragement, training, knowledge, and resources necessary to perform their job in a manner consistent with this policy.
- Communicate and demonstrate our commitment to the sound environmental policies and practices.

Implementation of the policy requires multi-disciplinary support of nearly all utilities' personnel.

## Review with Board

On an annual basis, and as part of its annual business plan, management will seek approval of its environmental policy and the ongoing projects to safeguard the environment and reduce the Company's ongoing greenhouse gas review.
